ISTpure’s SR Series Solvent Recyclers are designed to safely reclaim used solvents and other hazardous chemicals onsite. Our distillation process allows for the end product to be clean, distilled, and ready for subsequent cleaning applications.

Our units are safe to use and ergonomically designed to control and eliminate harmful vapors. They are fully automated and virtually maintenance-free – it only takes a few minutes to start the process.

MARKETS:
- Industrial Coating & Paint
- Printing & Packaging Industry
- Woodworking & Cabinet Making
- Plastic Forming & Processing
- General Manufacturing
- Solvent-Based Cleaning

BENEFITS FOR YOUR BUSINESS:
- Save money on pure solvent purchases and waste solvent disposal fees
- Comply to hazardous waste disposal regulations
- Implement environmentally-friendly practices
- Reduce waste solvent stock piles

KEY FEATURES:
- Recovery rate: 97% and more
- Eliminates: 90% of to toxic waste
- Cycle time: 4 to 6 hours
- Working Temperature: 40-200 °C / 104-390 °F
- Recycles popular solvents: including mineral spirit, flexo, litho, and other.

- Easy to use: processor controlled, residue removal and positive-seal cover
- Safety standards¹: Class I, Div. 1, Group D UL standard 2208
- Meet NFPA2 codes²: codes 30, 33, 70.
- Certified: with the industry’s best warranty – 2-year manufacturer warranty

¹ CSA certified to UL standard 2208 in Canada and the U.S. for class I, Div.1, Group D Hazardous locations.
² http://www.nfpa.org/. It is of your responsibility to verify proof of certification prior to using such systems in your facility

**STANDARD COMPONENTS**

**DISTILLATION VESSEL**

Built with strong 304 stainless steel construction and insulated with 4” polyurethane on side wall and bottom. Our distillation vessel are tightly sealed with a locking lever and replaceable cover seals for safe and optimal working conditions.

**PLC CONTROL PANEL**

Recycling systems are supplied with intuitive programmable logic controller (PLC) mounted on the cabinet for operator convenience. PLC includes a microprocessor and software written and supported by IST. The software monitors the process conditions according to the parameters specified by the operator. Security levels are provided so only authorized personnel can make changes to the system parameters. The software also provides continuous information on the status of the operation and diagnostics for quickly pinpointing process conditions (Programmable Operating Parameters, Self-diagnosis of Process Faults with Alarm Signal Maintenance Schedule, Automatic System Operation).

**CONDENSER WITH MOTOR FAN**

Condenser equipped with a high-efficiency, explosion-proof motor fan ensures the system is working under acceptable temperature. By default, copper condenser is provided with the machine, but a stainless steel condenser is offered as an option.

**THERMAL OIL**

ISTpure’s exclusive thermal oil formula provides fast heating and increases heat transfer to the boiler. This oil is suitable for solvent with up-to 180°C / 355°F distillation point.

**POLYETHYLENE SLUDGE BAG**

Polyethylene sludge bags are designed to stand-up high-temperature distillation process and chemical agents. Sludge bags contain dirty solvent residues once the distillation process is completed. Consequently, they should be replaced and securely disposed after each process.
VACUUM SYSTEM

Vacuum system decreases the boiling point of certain solvents by 20 to 30%, thereby leading to less energy consumption and better distillation process overall. Vacuum is provided by an air vacuum generator using compressed air. The vacuum generator has a no mechanical moving part for long service life. A vacuum gage is also provided for fast visual inspection of the vacuum status. Vacuum is required for heavier-than-air solvent distillation process – such as mineral spirit, naphtha, Varsol Paint Thinner and others. It is also strongly recommended for optimizing the distillation process of most common types of solvents – such as acetone, MEK and lacquer thinner – when compressed air is available.

STAINLESS STEEL UPGRADE KIT

All stainless steel condenser and piping upgrade kit is available to provide additional protection from highly corrosive solvents.

AUTO-FILL SYSTEM WITH SOLVENT TRANSFER HOSE

Auto-fill system uses a diaphragm pump and the dirty solvent pump (optional on SR30 and SR60) to transfer the dirty solvent into the boiler. The process is controlled by a high level switch inside the boiler and is backed by fill sequence timers in the software.

Solvent transfer hose kit equipped with a filter to assist in the transfer of clean and used solvent. Requires a diaphragm pump to operate.

EXTERNAL LIGHT BOX

External light box kit allows the remote monitoring of the recycler from a centralized control room. The system consists of green-yellow-red light signals to indicate the system is running, cooling down, malfunctioning, or ready for a new batch.

OVERFILL PROTECTION KIT

Overfill sensor provides additional protection for vacuum tanks in case the operator forgets to empty it prior to starting a new batch. This switch will prevent the pump from transferring the dirty solvent into the boiler until the vacuum tank has been emptied. It is backed by fill sequence timers in the software and will let operators know that the vessel did not fill up.
ANTI-FOAM DISC

Anti-foam disc is required when proceeding with the distillation of some types of solvents to avoid foaming formation to draw through the piping and affecting the performance of the system.

HIGH TEMPERATURE KIT

High temperature kit consists of high temperature synthetic thermal oil, high performance vacuum generator and larger expansion oil tank for heating solvent with distillation point above 180°C / 356°F. Maximum operating temperature is 225°C / 43°F.

SLUDGE REMOVAL BASKET

Sludge removable basket makes it easier to remove the sludge bag from the boiler once the distillation process is finished. It can be attached to a railway crane or on optional lifting arm.

LIFTING ARM

The lifting arm is equipped with a hand crank reduces the level of effort required to lift the sludge basket from the boiler. Requires a sludge removal basket to operate.

OIL COOLING SYSTEM

This unit can rapidly lower the oil temperature by circulating it through a multi-plate heat exchanger, and a condensing system. This closed loop oil circulation draws heat away from the sludge until the sludge reaches a preset dump temperature. With this feature, the operator is able to dump the sludge from the distillation vessel under lower, safer temperature conditions and can proceed to a new batch quicker instead of waiting for the oil to cool down by itself. Maximum operating temperature is 225°C / 43°F.
CUSTOMERS TESTIMONIALS

"Ease of set up and parameter programming. Ease of operation. Virtually maintenance free other than annual thermic oil change and lid gasket replacement. There are 4 main solvents in the blend. Recovered solvent blend is very near clear. Removal of still bottoms, tank clean up and reload takes 30 minutes. The savings are significant if the recycler is running every day.

Keven King, Finish Equipment/HazMat supervisor

ROI*: 7 months  |  Volume recycled: 330 gal/month  |  Solvent type: paint and stain related blends

="It saves us a lot of money, reduces the waste shipped off-site and the purchase of virgin acetone to clean the fluid lines. We also sell our excess distilled acetone to nearby metal finishing companies.”

John Earl, Environmental Manager

ROI*: 5 months  |  Volume recycled: 765 gal/month  |  Solvent type: acetone

="Very good solvent recovery unit, easy to operate and not all all complex to manage. I am very satisfied with this system”

Normand Reid, General Manager

ROI*: 15 months  |  Volume recycled: 493 gal/month  |  Solvent type: paint and solvent mixtures

*ROI: Return On Investment

MOST OF OUR CUSTOMERS HAVE GAINED A RETURN ON INVESTMENT (ROI) IN AS LITTLE AS 4 TO 12 MONTHS! ESTIMATE YOURS TODAY!

WHO WE ARE

IST is a leading industrial manufacturer of standard and custom engineered equipment for the surface treatment industry and the solvent recycling industry.

MISSION

IST is dedicated to being an innovative and trusted supplier in the conception, fabrication and distribution of surface treatment equipment and recycling equipment.

MARKETS SERVED

The products, technologies and industry expertise of IST are used in a wide range of manufacturing and industrial applications, including but not limited to:

- General Manufacturing
- Industrial Equipment
- Metal forming
- Aerospace and Aviation
- Rail and Transit
- Marine
- Automotive
- Petroleum
- Flexography (Labeling) & Lithography
- Wood finishing
- Power & Energy
- Pharmaceutical
