

**INLINE FILTRATION SYSTEM : BLUE FILTER**

Increase your spray gun washer cleaning performance by up to 400% with the optional “Blue Filter” filtration system.

The “Blue Filter” inline filter removes the paint solids from the cleaning solution as the washer is running and thus increases significantly the washer’s cleaning performance allowing to reduce cleaning fluid consumption, hazardous wastes, and VOC emissions. The result is cleaner spray guns and cleaner fluid reusable for more washing cycles.

Adding the “Blue Filter” to your spray gun washer not only increases the cleaning performance of your equipment, it also extends its lifespan and reduces its maintenance as it keeps the machine cleaner for longer and prevents jets getting blocked.

The “Blue Filter” inline filter is compatible with most of our spray gun washers and requires simple filter changes.

**KEY FEATURES**

- ✓ **Improves the cleaning performance by up to 400%** (25 L solvent drum washes capacity can be increased from 80-100 washes to up to 400 washes when using the “Blue Filter”)
- ✓ **Reduces VOC emissions** of solvent-based cleaning by up to 75%
